

Business Rule & Policy Impact Discovery from Code, Powered by AI

Turn Hidden Business Logic into Visible Business Intelligence

Business rules rarely live in documentation. They live in code buried across stored procedures, Salesforce Apex, legacy applications, APIs, and integration layers. Over time, that logic becomes fragmented, undocumented, and understood by only a handful of developers.

Prolifics Systems Intelligence changes that.

Powered by the **Prolifics Code Profiler and Transformer (PCPT)** and private **Azure OpenAI Services**, this fixed-price engagement automatically discovers, extracts, validates, and visualizes business rules directly from your existing applications and codebase; transforming hidden system behavior into a searchable, explainable, enterprise knowledge graph.

What the Solution Does

Using AI-powered code analysis and domain validation, Prolifics identifies:

- ✓ Business rules and decision logic.
- ✓ Policies enforced across applications.
- ✓ Runtime behavior and dependency flows.
- ✓ Business entities and relationships.
- ✓ Downstream impacts of change.

The results are delivered through the **Systems Intelligence Portal**, where business and technical users can explore findings visually or simply ask questions in plain English.

Built on Microsoft Azure AI

This offering is designed for Microsoft environments and powered by:

Azure OpenAI Service

Microsoft Azure

Azure AI Services

All AI processing is performed using **private Azure OpenAI services**. Customer data is **never used to train models**.

Fixed-Price Engagement: \$20,000

Scope Includes:

- ✓ Analysis of up to 20 code artifacts.
- ✓ Single business scenario, fixed scope.
- ✓ Secure AI-assisted code for ingestion and processing.
- ✓ Extraction of business rules, entities, sequences, and decisions.
- ✓ Validation workshops with Prolifics business analysts.
- ✓ Deployment of the Systems Intelligence Portal.
- ✓ Executive summary and recommendations for presentation.

What You Receive

Deliverable	Business Value
Business Rules Catalogue	Every rule named, described, and searchable
Ontology & Entity Mapping	Shared understanding across business and IT
Behavior Catalogue	Trace business behavior to implementation
Runtime Sequences	Understand interactions and dependencies
Decision & Impact Visualization	Assess downstream impact before change
Natural Language Ask Capability	Query your systems in plain English
Executive Summary	Strategic findings and modernization roadmap

Key Business Outcomes

Eliminate Hidden Logic Risk

Business logic embedded in code becomes transparent, searchable, and understandable across teams.

Accelerate Modernization

Gain a verified inventory of policies and dependencies before migration, transformation, or BRMS adoption.

Improve Compliance & Audit Readiness

Traceable, validated outputs reduce operational and compliance risk.

Empower Business Users

Stakeholders can ask questions directly without needing developers to investigate code.

Enable Confident Change Impact Analysis

Understand what changes affect; before implementing them.

The Strategic **Next Step**

Once rules are extracted and validated, the same PCPT engine can help externalize them into a modern rules platform; enabling business users to manage policies without relying on development cycles or reverse-engineering legacy code.

Discovery first. Externalization when you are ready. No rework between the two.

Offering Details

Field	Value
Marketplace Category	AI + Machine Learning
Primary Product	Microsoft Azure
Applicable Products	Azure OpenAI Service, Azure AI Services, Azure
Industry	Professional Services
Pricing Model	Fixed Price
Price	\$20,000 USD
Availability	United States, Canada, United Kingdom, India
